

How can smart actuators contribute to your Industry 4.0 efforts?

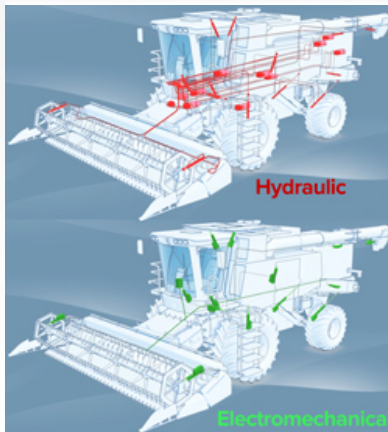

As Industry 4.0 initiatives bring more and more connected axes of motion into the realm of automation, the need for cost-effective control across these components grows as well.

In a recent Control Drives and Automation article, the features and benefits of today's smart electromechanical actuators featuring onboard electronics were explored. These products enable design engineers to automate intermittent operations affordably by embedding functionality that has previously required an external infrastructure.

Smart Actuator Webinar Series

Part 2 now open for registration

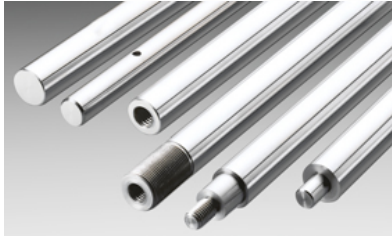

Are you ready to design machines with a smaller footprint, simpler installation, better control and static load handling, higher accuracy, and less maintenance, mess, noise, and overall system cost? In the latest installment of our Smart Actuator Webinar Series, these benefits will be explored as well as applications best suited for hydraulic-to-electromechanical conversion.

Join our second LIVE webinar in a series of six on **26 June 2018**:

Rethinking Machine Design: Converting From Hydraulic To Electromechanical Actuation.

Equip demanding applications with new T-Case™ LinearRace® shafting

New Thomson T-Case LinearRace steel shafting is readily available for your automation projects, offering a handful of benefits, including:

- High quality – suitable & warranted for use with Thomson Ball Bushing® bearings.
- Fast lead times – available from stock, cut-to-length in 1-2 days, standard machining (< 30 pieces) in 5 days.
